

Practical Test – Automation

Duration

You have 3 days to complete the assessment provided below.

Objective

To automate a standard cinema ticket purchase using the Cash payment method.

(You are not required to automate every feature of the POS system or multiple payment methods.)

Step 1 - Login to CINESync POS (<https://cinesync-pos-feature-2.layoutindex.dev/>)

- Launch the application and log in using the credentials provided.
- Enter the following information:
 - Access Code: CINFTW
 - License Code: QATEST
 - Username: QATester
 - Password: Test@123
- Verify that the login is successful and the main dashboard is displayed.

Step 2 - Open Cashier Module

- After successful login, three modules will be available:
 - Cashier
 - Customer Display
 - Logout

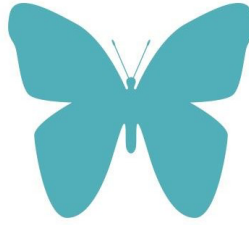

Select the **Cashier** module to begin the POS transaction.

Step 3 – Navigate to Tickets

- Inside the Cashier module, several menu options will be displayed (such as Tickets, Customers, Memberships, etc.).

For this assignment:

- Navigate only to the Tickets module.
- No other modules need to be automated.

Step 4 – Select a Movie

- Choose **any available movie** from the list.

Note: Since this is a shared QA environment, available movies and showtimes may change over time. Your automation should be flexible enough to work with any available movie instead of relying on fixed test data.

Step 5 – Select Ticket Type

- Choose **any available ticket type** (for example Adult, Child, Senior, etc.).
- You are free to select whichever ticket type is available during execution.

Step 6 – Continue the Purchase Flow

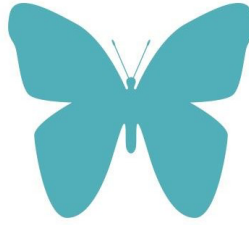

- Continue through the normal ticket-selling process by:
 - Adding the ticket(s) to the sale
 - Proceeding to checkout
- Reviewing the order summary Implement suitable assertions throughout the flow to verify that the application behaves as expected.

Step 7 – Complete Payment

- Complete the transaction using the **Cash** payment method only.
- Verify that the payment is successfully completed and the transaction finishes without errors.

Assignment Scope

- Expected to automate only the flow described above.
- The following items are **out of scope**:
 - Other payment methods (Card, Online, Gift Voucher, etc.)
 - Refunds
 - Ticket cancellation
 - Customer management
 - Membership features
 - Discounts, promotions, coupons
 - Customer Display module
 - Logout flow
 - Any other POS modules

Expectations

- Your automation should demonstrate:
 - Clean project structure (Page Object Model or similar)
 - Reliable and maintainable locators
 - Appropriate synchronization (avoid hard-coded waits)
 - Meaningful assertions
 - Readable, reusable code
 - Proper handling of dynamic data where applicable

The focus of this assignment is automation quality and code maintainability, rather than automating every possible application feature.
